Summary

Dynamic DevOps engineer with 1.5+ years of experience automating system setups, managing CI/CD pipelines, and deploying workloads on Azure and on-premises. Skilled in Python, Bash, Containerization, and prototyping embedded systems with Raspberry Pi and Jetson Nano. Achieved 60-70% Azure cost reduction via migration to Azure Container Apps. Currently developing a monitoring dashboard for 23+ remote devices using Grafana, Prometheus and Loki, with a focus on secure, resilient workflows.

Education

B.Tech. Computer Science and Engineering
Shri Shankaracharya Technical Campus, Bhilai, Durg

Nov 2020 – May 2024
CPI 8.62

Experience

Technical Trainee (Software, Hardware, and DevOps)
Containova Systems LLP, Navi Mumbai, India

Jun 2024 – Present

- Optimized Azure costs by 60-70% through migration to Azure Container Apps, integrating with Azure Container Registry.
- Deployed and managing scalable Azure and on-premises environments with Dokploy, ensuring 99.9% uptime.
- Secured development workflows by hardening GitLab (RBAC + SSL), boosting collaboration efficiency by 30
- Containerized Express, Flask, and Angular applications to enhance deployment efficiency and scalability.
- Created over 3 GitLab CI/CD pipelines to automate Docker image creation, health validation, and integrated rollouts with GitLab Runner using Docker-in-Docker (DinD) architecture.
- Integrated Azure Container Registry (ACR) with GitLab CI/CD for seamless image publishing and automated rollouts to Azure Container Apps using az-cli.
- Automated configuration using 10+ Python/Bash scripts, reducing bare-metal configuration time by 67%.
- Developed Python scripts for a centimeter-accurate GPS system, enabling precise tracking in logistics applications.
- Secured remote access to remote devices and on-premises devices using VPN tools including WireGuard, Zerotier, Tailscale, and Headscale.
- Designed and deployed over 3 embedded system prototypes using Raspberry Pi 5 and Jetson Nano, integrating ASIC modules for a 300% boost in computational throughput.
- Developing a monitoring dashboard using Grafana and Prometheus, supporting real-time oversight of 23+ remote devices and 3+ servers.

Hardware and Software Intern

Containova Systems LLP, Navi Mumbai, India

Jul 2023 – Jun 2024

- Deployed self-hosted GitLab on-premises and configured Jetson Nano and Raspberry Pi 4 environments to meet project specifications.
- Trained CNN models and supported high-precision GPS system development.
- Documented hardware configuration and deployment process for internal team use.

Skills

- **Languages:** Python, Bash
- **Tools:** Git, GitLab, Docker, Ansible, Prometheus, Grafana, Loki, Dokploy
- **Cloud Platforms:** Microsoft Azure (VMs, ACR, ACS, App Service, Blob Storage, Postgres, Log Workspace)
- **Operating Systems:** Linux (Ubuntu, Raspbian)
- **Embedded Systems:** Raspberry Pi 5, Jetson Nano, ASIC Integration, Proprietary GPS Modules
- **Utilities & Networking:** systemd, crontab, nmcli, wireguard, Zerotier, tailscale, headscale

Certifications

- DevOps Engineering: Planning To Production | Geeks For Geeks | May 2025
- Learn Ethical Hacking From Scratch | Udemy | Aug 2022
- MTA: Introduction to Programming Using Python | Microsoft | Nov 2021
- MTA: Security Fundamentals | Microsoft | Oct 2021

Projects

System Monitoring Dashboard

Aug 2025 – Present

- Developing a system monitoring dashboard using Prometheus, Node Exporter, Loki, and Promtail, with visualization through Grafana.
- **Project Link:** <https://github.com/bash-sankalp/system-monitoring>

NORS Automata v1.0 Home Automation

Mar 2023

- Developed a Raspberry Pi-based home automation system with voice, gesture, and web-app control during a hackathon.

Interests

Raspberry Pi Projects, Linux Customization, Self-hosted Tools, Cybersecurity, Networking.
